Compact Reverse Vending Machines

Simple and sustainable recycling
for plastic PET bottles

WHAT IS A REVERSE VENDING MACHINE?

A reverse vending machine allows users to return empty beverage containers such as bottles and cans for recycling, while often receiving a deposit or refund amount in return. The machine collects and sorts the containers, reducing reliance on landfill for plastic bottle disposal.

LSM MODEL RV200

User-friendly and easy to clean, the LSM reverse vending machine can be tailored to any specifications and caters for multiple deposit systems including membership cards and vouchers. The machine allows for bottles of up to 2 litres in size and has a capacity of up to 200 (500ml) plastic bottles.

RECYCLE & REWARD

- ✓ Reduce reliance on landfill for plastic bottle disposal
- ✓ Receive a deposit, refund amount, or voucher
- ✓ LSM Digi System can also add rewards to retail outlet membership cards

INSTORE BENEFITS

- ✓ Prime position for your water or drinks suppliers
- ✓ Increase customer retention
- ✓ Promote recycling awareness and educate through customer experience

45%
of used plastic bottles
sent to landfill every
day in the UK

7-Eleven in Tokyo
have installed over
300
of these machines

INSTALLATION & MAINTENANCE

LSM Reverse vending provides a total recycling solution, which includes design, installation, staff training, regular maintenance and waste support. This includes the technology to record and monitor ongoing usage of all machines installed and only requires a single phase supply and internet connection.
